The top of the series in terms of power and penetration, the XSD450 is a bipolar unit of the BALTOGRAPH series. Made up of two 225 kV unit (Cathodic + Anodic), it uses the same modules as the monopolar unit and can consist in an upgrade of an existing monopolar unit from the XSD series. Completely renewed during summer 2014, it keeps all previous features but has been made with the latest available components, reduced in size, weight, etc.

Dedicated to heavy walled applications that deserve both a high power and a high penetration, this unit makes no compromises to quality. With our very stable HV generator block, the output will fit into any of your applications and detectors types. Various tubeheads can be connected and our specialists will help you in defining which is the most adapted to your applications.

MECHANICAL DRAWING

Combined to our computerized control panel (LS1 series), it can be integrated in any environment, can replace the majority of existing units without big changes or any, or can be installed as a single end unit.
